Mr. Richard Dreher
Chief Financial Officer
Pennsylvania Turnpike Commission
700 South Eisenhower Boulevard
Middletown, PA 17057

Subject: Pennsylvania Turnpike Commission 2022 Traffic and Toll Revenue Bring Down Letter

Dear Mr. Dreher:

The Pennsylvania Turnpike Commission (PTC or Commission) asked CDM Smith to prepare this *2022 Traffic and Toll Revenue Bring Down Letter* (2022 Bring Down Letter) to be used in support of the Commission's ongoing capital improvement program and other funding requirements. This letter provides an update to the *2021 Traffic and Toll Revenue Bring Down Letter* (2021 Bring Down Letter) dated May 28, 2021. This was the most recent update to a series of traffic and toll revenue forecasts that also includes the *6-Month Update to the 2020 Traffic and Toll Revenue Bring Down Letter* (2020 6-Month Update) dated December 18, 2020; the *2020 Traffic and Toll Revenue Bring Down Letter* (2020 Bring Down Letter), dated May 29, 2020; the *2019 Traffic and Toll Revenue Bring Down Letter* (2019 Bring Down Letter), dated April 29, 2019; and the *2018 Traffic and Toll Revenue Forecast Study* (2018 Forecast Study), dated April 20, 2018.

The 2021 Bring Down Letter included actual data through March 2021 and presented traffic and gross toll revenue forecasts from fiscal year (FY) 2020-21 through FY 2049-50. A fiscal year runs from June 1 through May 31. An additional 14 months of actual data (through May 2022) were available for this 2022 Bring Down Letter. The forecast period for this study is one additional year into the future, now extending through FY 2050-51.

This report will provide a summary of differences between the current traffic and revenue forecast and the one provided in the 2021 Bring Down Letter.

The updated forecasts reflect the following changes from the 2021 Bring Down Letter:

- E-ZPass market share estimates over the forecast period were reviewed and updated as needed.
- Actual traffic and toll revenue data were updated to include information through May 2022.

Mr. Richard Dreher

July 8, 2022

Page 2

- A detailed review of COVID-19 related impacts was conducted based on an additional 14 months of actual data. Revised COVID-19 impacts have now been applied to the forecasts. In the previous forecast, no COVID-19 impacts are assumed after FY 2025-26, however the current forecast has lingering COVID-19 impacts throughout the remainder of the forecast period through FY 2050-51. The elevated gas prices that the U.S. has been experiencing since early 2022 are also expected to negatively impact transactions and revenue for much of the remainder of the decade, and thus additional fuel price impacts have been aggregated with COVID-19 impacts through FY 2028-29.
- A review of scheduled major roadway improvements was conducted to determine if there have been any changes since completion of the 2021 Bring Down Letter. Two new projects have been added, and the timing of others has been adjusted. This will be discussed in the Committed Roadway Improvements section of this report.
- The underlying econometric model that was developed as part of the 2018 Forecast Study will continue to be used, as has been the case with all Bring Down Letters since. However, the independent socioeconomic variables (population, employment, gross domestic product [GDP], retail sales, and motor fuel prices) that were used as inputs into the econometric model have been updated with the latest available forecasts. The resultant outputs from the econometric model have been utilized as part of the updated baseline transactions and revenue forecast.

These differences are described in more detail in the sections that follow below.

It is important to note that the intent of this 2022 Bring Down Letter is to review and revise, if warranted, the forecasts developed as part of the 2021 Bring Down Letter. Any adjustments would be made based on the 14 months of new actual traffic and toll revenue experience since the 2021 Bring Down Letter was completed, including COVID-19 impacts, as well as revised assumptions summarized in the bullet points above.

Historical Toll Rate Increases and Current Toll Rates

Table 1 provides a summary of historical toll rate increases on the Turnpike System from 1987 to the most recent increase implemented on January 2, 2022. Rate increases are presented as a percent increase over the prior toll rate for cash/video and E-ZPass. Note that toll rate increases are generally applied systemwide, although occasional exemptions occur, as indicated in Table 1.

Mr. Richard Dreher
 July 8, 2022
 Page 3

Table 1
Historical Toll Rate Increases
Pennsylvania Turnpike

Date	Percent Increase		Comment
	Cash/Video	E-ZPass	
1/2/1987	40.0	NA	E-ZPass was not yet implemented on the Turnpike
6/1/1991	32.0	NA	E-ZPass was not yet implemented on the Turnpike
8/1/2004	42.5	42.5	
1/4/2009	25.0	25.0	No increase on Findlay Connector or MFE between Uniontown and Brownsville
1/3/2010	3.0	3.0	No increase on Findlay Connector
1/2/2011	10.0	3.0	No increase on Findlay Connector
1/1/2012	10.0	0.0	No increase on Findlay Connector
1/6/2013	10.0	2.0	
1/5/2014	12.0	2.0	No increase on Findlay Connector
1/4/2015	5.0	5.0	No increase on Findlay Connector
1/3/2016	6.0	6.0	No increase on Findlay Connector; DRB converted from ticket system to barrier system and rate changes implemented
1/8/2017	6.0	6.0	No increase on Findlay Connector or DRB
1/7/2018	6.0	6.0	No increase on Findlay Connector, DRB, or the Northeast Extension barrier facilities
4/29/2018	6.0	6.0	Northeast Extension barrier facilities only (1)
6/3/2018	6.0	6.0	Findlay Connector only (1)
1/6/2019	6.0	6.0	
10/27/2019	6.0	6.0	BVE, AKH, and Gateway only; additional 45% surcharge over cash rate added to video rate at these locations
1/5/2020	6.0	6.0	No increase on BVE, AKH, or Gateway
1/3/2021	6.0	6.0	Additional 45% surcharge over cash rate added to video rate for Ticket System and MFE
1/2/2022	5.0	5.0	No increase on Southern Beltway

Note: Beginning in 2016, all cash toll rate increases also reflect video toll rate increases.

(1) Toll rate increase coincided with vehicle classification changes from a weight-based to an axle-based system.

Mr. Richard Dreher

July 8, 2022

Page 4

Periodic toll rate increases were implemented on the Turnpike System in 1987, 1991, and 2004. Beginning in 2009, annual toll increases have been implemented. During the 2000s decade, E-ZPass was phased into the Turnpike System. Until 2011, cash and E-ZPass toll rates always increased by the same percent. The toll rate schedule implemented on January 2, 2011 created a differential between cash and E-ZPass, as E-ZPass rates were increased by 3.0 percent and cash toll were increased by 10.0 percent. Rate increases differed between cash and E-ZPass in 2012, 2013, and 2014 further increasing the differential between cash and E-ZPass toll rates. After 2014, rate increases have been applied equally to both cash/video and E-ZPass.

In 2015 toll rates increased by 5.0 percent. From 2016 to 2021, toll rates increased by 6.0 percent annually for both cash/video and E-ZPass. In 2022, the toll rate increase was 5.0 percent. As of June 2020, the entire Pennsylvania Turnpike System is an all-electronic tolling (AET) system; cash is no longer accepted, with all payments being conducted via E-ZPass or video tolling.

PTC policy has also been to implement a video toll surcharge upon conversion to AET; this has generally amounted to an additional 45-percent increase, making video rates about double E-ZPass rates. This 45-percent video surcharge was implemented on the last two components of the Pennsylvania Turnpike System that had previously lacked it, the Ticket System and MFE, in conjunction with the system-wide toll increase that was implemented on January 3, 2021. It is assumed that annual toll rate increases will occur throughout the forecast period, as described in the section Actual and Assumed Toll Rate Increases and shown in Table 13.

Figures 1 and 2 show the 2022 per-mile toll rates for a through-trip on 47 U.S. toll facilities, for passenger cars (PCs) and 5-axle commercial vehicles (CVs), respectively. Per-mile rates are shown for both cash/video and electronic toll collection (ETC) transactions in each figure. If a facility is all electronic (does not accept cash payments), the video toll rate is shown as the equivalent of a cash toll rate. All ETC facilities are marked with a diamond in Figures 1 and 2.

The per-mile through-trip toll rate is shown for the Pennsylvania Turnpike Mainline, which represents a trip on I-76/I-276/I-95 between Ohio and New Jersey. Figure 1 shows that despite 13 consecutive annual toll increases since 2009, PC per-mile toll rates on the Pennsylvania Turnpike System, at 14 cents per mile for E-ZPass customers and 28 cents per mile for video customers, are still very reasonably priced compared to other toll facilities in the U.S. In fact, the Pennsylvania Turnpike's PC ETC per-mile rates fall exactly in the middle of the 47 surveyed facilities.

Toll rates for 5-axle CVs (represented by weight class 6 for the Pennsylvania Turnpike Mainline) are equivalent to 52 cents per mile for E-ZPass and \$1.06 per mile for video transactions for a through-trip on the Pennsylvania Turnpike Mainline. It should be remembered that the vast majority of both PC and CV trips are made using the more cost-effective E-ZPass payment method. This rate is also competitive with the surveyed peer facilities, ranking 28th of 47 facilities.

**COMPARISON OF 2022 PASSENGER CAR PER-MILE THROUGH TRIP TOLL RATES
(DATA SORTED BY ETC TOLL RATES)**

COMPARISON OF 2022 FIVE-AXLE VEHICLE PER-MILE THROUGH TRIP TOLL RATES (DATA SORTED BY ETC TOLL RATES)

Mr. Richard Dreher

July 8, 2022

Page 7

Annual Transaction and Gross Toll Revenue Trends

Table 2 provides a summary of annual systemwide transactions and gross toll revenue trends from FY 1994-95 through FY 2021-22. Notably, this table excludes non-revenue transactions from PTC's non-AET facilities. The Pennsylvania Turnpike System is a large, mature system that has demonstrated long-term growth in transactions and toll revenue. Between FY 1994-95 and FY 2007-08 there was only one toll rate increase (in 2004) and Turnpike transactions and gross toll revenue grew by an average annual rate of 3.0 percent and 5.5 percent, respectively. Conversely, in the 11 years from FY 2008-09 to FY 2018-19, which was the last fiscal year to be completed before the onset of the COVID-19 pandemic, there were toll rate increases every year. During this period Turnpike transactions grew more slowly, by 0.6 percent annually, but due to the annual toll rate increases, Turnpike revenue grew more quickly, by 7.6 percent annually. In the three fiscal years since the start of the pandemic, from FY 2018-19 to FY 2021-22, total transactions fell by a total of 2.5 percent compared to FY 2018-19, an average of 0.9 percent per year. However, due to toll rate increases, total revenue was able to grow over the same period by a total of 17.5 percent, or 5.5 percent per year.

Mr. Richard Dreher

FY 1994-95 - FY 2021-22	1.4	2.9	1.6	6.1	6.6	6.4

- (1) Fiscal year beginning June 1.
- (2) The Delaware River Bridge toll plaza was converted from part of the Ticket System to a one-way barrier AET facility in January 2016.
- (3) The Delaware River Bridge was closed due to structural integrity concerns from January 20, 2017 to March 9, 2017.
- (4) AET conversion was implemented on Turnpike I-376 Beaver Valley Expressway in May 2017.
- (5) AET conversion and vehicle classification changes were implemented on the Northeast Extension Barrier Facilities in April 2018.
- (6) Toll by Plate surcharge for I-376 Beaver Valley Expressway was increased in October 2019.
- (7) AET conversion was implemented at Gateway Toll Plaza and Turnpike 66 in October 2019.
- (8) AET conversion with no surcharge for Toll by Plate was implemented on the Ticket System on March 16, 2020.
- (9) AET conversion with no surcharge for Toll by Plate was implemented on the Mon/Fayette Expressway on June 16, 2020.
- (10) A 13.2 mile extension of the Southern Beltway opened on October 15, 2021.

Mr. Richard Dreher

July 8, 2022

Page 9

Monthly Transactions and Gross Toll Revenue Trends

Tables 3 through 12 present recent monthly transaction and gross toll revenue trends from FY 2018-19 through the end of FY 2021-22 (May 2022) for all PTC facilities. The information is provided for PCs, CVs, and total vehicles. The facilities are summarized in the following order:

- Table 3 – the total Turnpike System (comprised of all the facilities listed below);
- Table 4 – the Ticket System (comprised of I-76/I-276 and I-476);
- Table 5 – the combined Barrier System (comprised of all facilities listed below);
- Table 6 – Turnpike 43 (Mon/Fayette Expressway) (MFE);
- Table 7 – Turnpike 66 (Amos K. Hutchinson Bypass) (AKH);
- Table 8 – Northeast Extension (I-476) barrier plazas;
- Table 9 – Turnpike I-376 (Beaver Valley Expressway) (BVE);
- Table 10 – Turnpike I-576 (Southern Beltway – Findlay Connector);
- Table 11 – Delaware River Bridge (DRB); and
- Table 12 – Gateway Toll Plaza.

As shown in Table 3, total systemwide gross toll revenue decreased by 3.4 percent in FY 2019-20, the last three months of which were impacted by the COVID-19 pandemic. Even though the most significant monthly revenue losses occurred in FY 2019-20, total year revenues declined 2.4 percent further in FY 2020-21, as year-over-year revenues were down in the first nine months of the fiscal year due to being compared against pre-COVID revenues. However, revenue increased greatly in the final three months of the fiscal year (March, April, and May 2021) as traffic had grown significantly compared to the same months in 2020, which were the earliest stages of the pandemic. In FY 2021-22, toll revenue continued to grow and was 24.7 percent greater than the previous fiscal year. In fact, toll revenue in this most recent fiscal year was 17.5 percent higher than in FY 2018-19, which was entirely prior to, and thus unaffected by, the pandemic. CV toll revenue increased by 15.5 percent and PC toll revenue increased by 34.4 percent in FY 2021-22 compared to FY 2020-21. PC growth was stronger than CV growth because PCs were more significantly impacted by the pandemic and experienced steep declines during FY 2020-21, while CV revenue was impacted less severely and had returned to positive growth by September 2020.

It is important to note, however, that the negative impacts of COVID-19 have diminished greatly over time. In April 2020 (which includes the first full month of COVID-19 impacts), total gross toll

Mr. Richard Dreher

July 8, 2022

Page 10

revenue was 49.2 percent lower than the same month in 2019. That negative impact decreased over each of the next six months, such that October 2020 gross toll revenue was only 9.8 percent lower than the same month in the prior year. While negative revenue impacts grew over the winter months, due to both increasing infection rates (in November, December, and January) and snowstorms (February), March 2021 experienced positive revenue growth for the first time since the start of the pandemic. During this month both PC and CV traffic increased significantly compared to March 2020. As a result, total gross toll revenue was 32.0 higher in March 2021 than it was in March 2020. This large positive result in March 2021 is because this is the first month when growth is compared to a prior year's month that also included COVID-19 impacts.

During the second year of the pandemic, March 2021 through February 2022, year-over-year transactions increased by at least 8.7 percent each month. Excluding January 2022, during which Pennsylvania was hit with both the Omicron variant and multiple snowstorms, transaction growth was at least 14.0 percent each month. Due to the annual toll increases in January 2021 and January 2022, revenue grew even more, with growth of at least 19.9 percent each month. As the pandemic enters its third year, transaction and revenue growth in March, April, and May 2022 continued to be strong, if somewhat less robust than the prior year. In May 2022, the most recent month for which data is available, transactions grew by 7.1 percent and revenue grew by 9.4 percent compared to May 2021.

As previously mentioned, the Ticket System is by far the largest component of both traffic and toll revenue on the Turnpike System. As such, its overall growth patterns generally resemble those for the total system. As shown in Table 4, in FY 2021-22 total transactions increased 17.0 percent from the prior year, while toll revenue increased by 24.5 percent. PC transactions increased by 19.1 percent, while toll revenue grew 34.9 percent. CV transactions grew by 8.1 percent and toll revenue grew 15.3 percent compared to FY 2020-21.

Prior to the impacts of COVID-19 beginning in March 2020, annual year-over-year Ticket System toll transaction growth generally had been slightly negative for PCs and slightly positive for CVs. Annual toll rate increases, however, resulted in significant revenue increases over this time for both PCs and CVs on the Ticket System. As with the total systemwide trends shown in Table 3, the negative impacts of COVID-19 were greatest on the Ticket System in April 2020, when total transactions decreased by 61.3 percent and toll revenue decreased by 50.3 percent. By October 2020, however, the negative impacts were just 15.9 percent for transactions and 11.6 percent for toll revenue. Impacts grew more negative over the winter before rebounding in March, which experienced significant positive growth in both transactions and revenue for both PCs and CVs, although part of the reason for this positive growth was due to comparison against COVID-impacted figures in March 2020. In the 14 months since then, transactions have each continued to grow by at least 3.7 percent each month, while revenue has grown even faster, with growth of at least 8.0 percent each month. Notably, however, the lowest growth figures for both transactions and revenue

Mr. Richard Dreher

July 8, 2022

Page 11

in these last 14 months occurred in May 2022, the most recent month for which data is available. This may indicate that although growth is still occurring, the rate of growth is slowing, although this cannot be confirmed without a few more months of data. Throughout the pandemic, negative impacts have been more pronounced for PCs than for CVs.

Table 5 provides the same information for all barrier toll facilities combined. Barrier facility toll revenue comprises about 15 percent of total systemwide toll revenue. The negative impacts of COVID-19 on the barrier facilities are similar to those on the Ticket System. However, the recovery rate seems to be somewhat faster for the barrier facilities. During FY 2020-21, barrier facility toll transactions only fell 6.3 percent, compared to 8.0 percent on the Ticket System. In FY 2021-22, barrier system transactions grew 21.1 percent compared to 17.0 percent for the Ticket System. Revenue has behaved similarly, with the barrier system actually experiencing 4.3 percent growth during FY 2020-21, compared to a 3.5 percent decline on the Ticket System. However, barrier facilities' revenue growth only slightly outpaced Ticket System revenue growth in FY 2021-22, 25.6 percent to 24.5 percent. Part of these faster growth rates for the barrier system in FY 2021-22 can be attributable to a 13.2-mile extension of the Southern Beltway that opened on October 15, 2021.

The same information is provided for each individual barrier facility in Tables 6 through 12. As seen in Table 10, growth was particularly strong on the Southern Beltway in FY 2021-22, with transactions and revenue growing 203.7 percent and 223.6 percent, respectively, compared to FY 2020-21. This is due to the aforementioned 13.2-mile extension that opened in October 2021.

Mr. Richard Dreher

NOTES:
 (1) Toll increases occur every year with exceptions. Refer to Table 1 for details.
 (2) Leap year occurred in 2020, resulting in exaggerated traffic and toll revenue impacts in February 2020 compared to February 2019.
 (3) In response to the COVID-19 pandemic, schools were closed state-wide on March 16, 2020 and stay at home orders for some counties began to take effect on March 23, 2020. A state-wide stay at home order was issued April 1, 2020 and lifted on June 5, 2020.
 (4) AET conversion and vehicle classification changes were implemented on the Turnpike I-576 Findlay Connector in June 2018.
 (5) AET conversion was implemented on Turnpike 66 Amos K. Hutchins Bypass and Gateway Toll Plaza in October 2019.
 (6) AET conversion was implemented on the Ticket System and Mon/Fayette Expressway in June 2020.
 (7) A 13.2 mile extension of the Southern Beltway opened on October 15, 2021.

Mr. Richard Dreher

NOTES:
 (1) Toll increases occur every year with exceptions. Refer to Table 1 for details.
 (2) Leap year occurred in 2020, resulting in exaggerated traffic and toll revenue impacts in February 2020 compared to February 2019.
 (3) In response to the COVID-19 pandemic, schools were closed state-wide on March 16, 2020 and stay at home orders for some counties began to take effect on March 23, 2020. A state-wide stay at home order was issued April 1, 2020 and lifted on June 5, 2020.
 (4) AET Conversions at Findlay Connector, Amos K Hutchinson Bypass, Gateway Toll Plaza, and Mori/Fayette Expressway in June 2018, October 2019, October 2019, and June 2020 respectively.
 (5) A 13.2 mile extension of the Southern Beltway opened on October 15, 2021.

Mr. Richard Dreher
 July 8, 2022

NOTES:
 (1) Toll increases occur every year with exceptions. Refer to Table 1 for details.
 (2) Leap year occurred in 2020, resulting in exaggerated traffic and toll revenue impacts in February 2020 compared to February 2019.
 (3) In response to the COVID-19 pandemic, schools were closed state-wide on March 16, 2020 and stay at home orders for some counties began to take effect on March 23, 2020. A state-wide stay at home order was issued April 1, 2020 and lifted on June 5, 2020.

Mr. Richard Dreher

NOTES:
 (1) Toll increases occur every year with exceptions. Refer to Table 1 for details.
 (2) Leap year occurred in 2020, resulting in exaggerated traffic and toll revenue impacts in February 2020 compared to February 2019.
 (3) In response to the COVID-19 pandemic, schools were closed state-wide on March 16, 2020 and stay at home orders for some counties began to take effect on March 23, 2020. A state-wide stay at home order was issued April 1, 2020 and lifted on June 5, 2020.
 (4) AET conversion occurred in October 2019.

Mr. Richard Dreher
 July 8, 2022
 Page 22

Actual and Assumed Toll Rate Increases

Annual toll rate increases are assumed to occur on the entire Turnpike System. The toll rate increases are assumed to occur at 12:01 AM on the first Sunday after January 1 of each year unless otherwise noted. **Table 13** presents the annual percent increases in toll rates for E-ZPass, video, and registered video accounts (RVA) from calendar year 2021 through 2051.

Table 13
Actual and Assumed Percent Changes in Turnpike System Toll Rates
 Pennsylvania Turnpike System

Calendar Year (2)	Percent Change in Turnpike System Toll Rates (1)		
	E-ZPass	Video	Registered Video Account (RVA)
2021 (3)	6.00	6.00/45.00 (4)	-15.00 (5)
2022 (3)	5.00 (6)	5.00 (6)	5.00 (6)

2050	3.00	3.00	3.00
2051	3.00	3.00	3.00

- (1) Toll rate increases are the same for all facilities and vehicle classes, except where otherwise noted.
 (2) Except where otherwise indicated, toll rate increases are applied on or near January 1.
 (3) Toll rate increases are actual.
 (4) All rates increased by 6%. Video rates increased by an additional 45% on the Ticket System and Mon Fayette Expressway (Turnpike 43) to bring the video rate premium in line with those on PTC's other AET facilities.
 (5) Registered video accounts are a new billing option that provides a 15% discount to video customers who pre-register their vehicle and provide electronic payment information.
 (6) No increase on the Southern Beltway.

Mr. Richard Dreher

July 8, 2022

Page 23

Rate increase assumptions are unchanged since the 2021 Bring Down Letter. With the suspension of cash collection in March and June of 2020 on the Ticket System and MFE, respectively, the Turnpike System now operates entirely under AET. As such, there are no cash rates shown in Table 13 for 2021 and beyond. As discussed above, to make the toll differential between E-ZPass and video rates similar on all toll facilities, in addition to a six-percent toll increase in January 2021, video rates on the Ticket System and MFE also increased by an additional 45 percent. Toll adjustment assumptions for the years 2023 and beyond are proposed and have not yet been formally approved by the PTC Board.

An additional rate tier, registered video account (RVA), has also been added to the rate schedule beginning in 2021. RVA accounts allow for a 15-percent discount off of the video rate for video customers who pre-register their vehicle with PTC and provide electronic payment information. This will allow PTC to process payments automatically without having to send billing invoices.

Actual and Assumed E-ZPass Penetration Rates

Table 14 presents the actual and assumed annual E-ZPass penetration rates from calendar year 2021 through 2051. The first three columns show the E-ZPass market share assumptions for the 2022 Bring Down Letter. These were adjusted slightly on a facility-by-facility basis, by the amount shown in the three rightmost columns, over assumptions used in the 2021 Bring Down Letter.

As shown, assumed E-ZPass market shares in the current analysis are noticeably different from those assumed in the 2021 Bring Down Letter. In both 2021 and thus far in 2022, actual PC and CV E-ZPass market share have been significantly lower than previously estimated. This has resulted in new 2022 estimates being 9.1 (PC) and 6.6 (CV) percent lower than previous estimates. One reason for the lower-than-expected rate of E-ZPass market share is the increased prevalence of telecommuting since the start of the pandemic. Due to consistent users of a facility, such as commuters, being more likely to be E-ZPass customers, the decreased share of commuters on the PTC system has resulted in the remaining user base having lower overall rates of E-ZPass usage.

A second reason for the decline in E-ZPass market share is the reclassification of some types of transactions that has occurred since AET implementation on each of the Turnpike's constituent systems. Any transactions that are not immediately processed as successful roadside E-ZPass transactions are classified as video transactions. However, about one-third of video transactions are actually VTOLLS, which are transactions made by E-ZPass account holders where the transponder is not read properly at the roadside. While these transactions are later linked to an E-ZPass account, they are not counted towards E-ZPass penetration rates.

Since the beginning of the pandemic and the implementation of system-wide AET in the spring of 2020, the system-wide share of VTOLL transactions has increased notably, as illustrated in **Figure 3**. In this figure the yellow line represents the monthly share of system-wide E-ZPass

Mr. Richard Dreher

July 8, 2022

Page 24

transactions, which declined sharply between April and July of 2020 and has yet to recover. Conversely, the blue line represents the system-wide share of combined E-ZPass and VTOLL transactions. This reflects the true customer base that has an E-ZPass transponder, as by definition all VTOLL transactions must be conducted by an E-ZPass customer. While this larger category also experienced a decline in the spring and summer of 2020, it rebounded more quickly and the long-term trend (represented by the dotted blue line) remains much closer to its pre-pandemic level.

Furthermore, prior to AET implementation, Toll By Plate (video) non-revenue transactions had been excluded from total transaction statistics. These video transactions are now included in the total number of transactions, thus lowering E-ZPass penetration rates.

Over the rest of the forecast period, the E-ZPass market share for both PCs and CVs grows faster than previously assumed, but because of the significant differential between the two forecasts in 2022, E-ZPass market share is estimated to be 5.5 percent lower overall in 2050 than in the previous forecast.

Mr. Richard Dreher

Mr. Richard Dreher

July 8, 2022

Page 26

Summary of Changes in Future Year Estimates for U.S. Gross Domestic Product and Pennsylvania Gross State Product

This section presents a comparison of the Gross Domestic Product (GDP) and Pennsylvania Gross State Product (GSP) information available for the 2022 Bring Down Letter with updated forecasts for both measures from Moody's Analytics. This information was a key input in developing estimated growth forecasts for the Turnpike System. All GDP and GSP figures in this section refer to year-over-year comparisons. For example, the fourth quarter 2021 percent change would reflect the fourth quarter of 2021 versus the fourth quarter of 2020.

Figure 4 shows actual and estimated GDP at the time of the 2021 Bring Down Letter as well as the revised figures based on updated Moody's Analytics' forecasts as of May 2022. Since the 2021 Bring Down Letter, actual GDP growth figures have been released for an additional four quarters: the last three quarters of 2021 and the first quarter of 2022. While year-over-year GDP grew in each of these quarters, each also had lower growth than expected at the time of the 2021 Bring Down Letter, including a shrinking GDP between the fourth quarter of 2021 and the first quarter of 2022. The gap between actual and forecast GDP increased each quarter, growing from a 0.9 percent shortfall (12.2 percent actual compared to 13.1 percent forecast) in the second quarter of 2021 to a 3.5 percent shortfall (3.6 percent actual compared to 7.1 percent forecast) in the first quarter of 2022. This indicates that while some economic indicators, such as unemployment, remain strong, overall economic growth has slowed compared to May 2021.

Accordingly, GDP growth through the end of 2022 is now expected to be lower than previously forecast. However, for the first three quarters of 2023 growth is now expected to be higher than previously predicted, largely because GDP growth in 2022 is now expected to be less robust. Longer term, in the latest May 2022 forecast, year-over-year GDP is expected to grow at a steady rate of between 2.4 and 2.6 percent throughout 2024 and 2025, which is a rate similar to, although slightly below, the previously forecast.

Figure 4
Comparison of May 2021 to May 2022 Quarterly Growth Estimates of U.S. Gross Domestic Product

Sources: Historical estimates are from the BEA, and the forecasts are from Moody's Analytics (May 2021 and May 2022 Releases)

Figure 5 shows GSP trend and forecast data for Pennsylvania. However, because GSP data lags GDP data, GSP is actual through only the fourth quarter of 2021. Like GDP, actual GSP growth during 2021 was weaker than predicted at the time of the 2021 Bring Down Letter. First quarter 2021 GSP contracted more than forecast in April 2021 (falling 1.3 percent compared to the 0.4 percent decline forecast) and grew more slowly than forecast in the remaining three quarters of 2021. Similarly to GSP, growth in 2022 is now expected to be notably slower than previously forecast, with slightly stronger growth in 2023 and very similar, albeit slightly lower, growth than previously forecast in both 2024 and 2025.

Figure 5
Comparison of April 2021 and May 2022 Quarterly Growth Estimates of Pennsylvania Gross State Product

Sources: Historical estimates are from the BEA, and the forecasts are from Moody's Analytics (April 2021 and May 2022 Releases)

Summary of Trends in Fuel Prices

Figure 6 portrays actual gasoline and diesel prices for the central Atlantic region from January 2018 through May 2022. Actual gasoline prices for the east coast are also shown. They closely mirror those for the central Atlantic gasoline prices and are shown here because the Energy Information Administration (EIA) only provides monthly forecasts for this larger region. Figure 6 shows the monthly gasoline price forecast through the end of 2023.

As shown, central Atlantic gasoline and diesel prices have followed generally similar trends throughout this period and have moved in tandem. Prices for both increased slowly in early 2018, reaching a high of \$2.97 per gallon for gasoline in May 2018. Diesel prices reached a high of \$3.52 per gallon in October 2018. Prices of both gasoline and diesel fell in late 2018 and early 2019. Between February and May 2019 prices rose, with gasoline prices increasing more rapidly than diesel prices. For the remainder of 2019, prices decreased slightly, with diesel prices remaining very stable and gasoline prices experiencing slightly more volatility.

However, in 2020 prices fell sharply, first in response to an early March announcement that Saudi Arabia and Russia would increase oil supply in the coming months, and second, by an extreme

Mr. Richard Dreher

July 8, 2022

Page 29

worldwide economic slowdown in response to the COVID-19 pandemic. As a result, May 2020 per gallon prices in the Central Atlantic region fell to \$2.03 and \$2.68 for gasoline and diesel, respectively. Prices then stayed relatively flat for the next several months before beginning to rise quickly through the winter of 2020-21 as the economic effects of the pandemic waned. Prices continued to rise, albeit at a slower rate, through the spring, summer, and fall of 2021. Price increases briefly leveled off in the winter of 2021-22 before sharply increasing in February and, especially, March 2022 in response to uncertainty and disruptions in supply caused by the war in Ukraine and subsequent sanctions against Russia. Rising prices briefly abated in April before another sharp increase in May. During this month, nominal prices reached a high of \$4.59 per gallon of gasoline and \$6.26 per gallon of diesel in the central Atlantic region.

As noted above, the EIA only forecasts future gasoline prices for the east coast, which is a region that is larger than, and wholly encompasses, the central Atlantic region. Historically, east coast region prices move in tandem with central Atlantic prices but are approximately 10 to 20 cents lower. East coast gasoline prices are forecast to continue rising in June before falling throughout the remainder of 2022 and the first few months of 2023. Prices are then forecast to remain generally stable throughout 2023, at between \$3.51 and \$3.66 per gallon. Although these prices are significantly lower than current prices, they are also significantly higher than those experienced in the few years prior to 2022. Based on historical trends, central Atlantic prices can be expected to follow the same pattern, but at slightly higher prices.

The May 2022 gasoline prices are about \$1.83 higher than forecast at the time of the 2021 Bring Down Letter. Over the remainder of 2022, the current forecast is between \$1.23 and \$1.94 higher each month than the previous forecast. (A 2023 forecast was not available at the time of the 2021 Bring Down Letter.) The rapid increase in actual gasoline prices over the past few months and forecast slow decline of those prices in the coming 18 months, coupled with the highest inflation experienced in the past 40 years may be tempering desire for travel while these conditions persist, resulting in a less robust economic recovery than expected at the time of the 2021 Bring Down Letter. This largely aligns with the revised GDP and GSP forecasts discussed previously.

Source: U.S. Energy Information Administration, release dates 6/13/2022 (historical) and 6/7/2022 (forecast).
 Note: Retail Prices in USD for Regular All Formulations Retail Gasoline and Number 2 Diesel.
 Central Atlantic states include Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania.
 East Coast states include Central Atlantic and New England states, Florida, Georgia, North Carolina, South Carolina, Virginia, and West Virginia.

Consumer Confidence

Consumer confidence is an important measure in that it highlights consumer’s confidence in making purchases, their willingness to travel more, etc. Higher consumer confidence spurs demand for various goods and services, and it can be inferred that higher demand results in higher traffic on the roadways. Consumer confidence scores are indexed to the year 1985, for which consumer confidence equaled 100.

Figure 7 shows the Conference Board Consumer Confidence Index for the period between January 2018 and May 2022. Individual blue bars show index values for each month while the dotted line shows the three-month moving average. Consumer confidence exceeded 120 at the start of 2018 and rose throughout the year, peaking at a high of 137.9 in October 2018, which was the highest level of consumer confidence since September 2000. In 2019, consumer confidence fell slightly compared to 2018 but remained strong compared to historical levels.

Through the first two months of 2020, consumer confidence remained strong, increasing slightly since the end of 2019. However, since then, consumer confidence has fluctuated significantly, generally mirroring the national narrative regarding efforts to contain the COVID-19 pandemic. In 2020 consumer confidence declined sharply in March and even more significantly in April, when it fell to 85.7, reflecting the widespread economic shutdowns that were put in place as a result of the

Mr. Richard Dreher

July 8, 2022

Page 31

COVID-19 pandemic. Consumer confidence rose as economic and travel restrictions were lifted in May and June, when it reached 98.3, indicating that consumers' expectations for the economy may have been stabilizing. However, it fell again in July and August, bottoming out at 84.8, reflecting increased COVID-19 infection rates that occurred in much of the southern and western U.S. as those states further loosened restrictions on commercial activities and people moved activities indoors to air-conditioned spaces. The Index once again rose in September and October, reaching 101.4, which was its highest level since March. However, consumer confidence fell to 87.1 by December as infection rates and deaths from COVID-19 reached their highest levels at any point during the pandemic.

In 2021, as the nationwide vaccination campaign began and infection rates began to stabilize, consumer confidence rose slightly to 95.2 in February before jumping significantly to 114.9 in March, its highest level in a year. Consumer confidence rose incrementally in each of the following months, reaching 128.9 in June, which is equivalent to the fairly consistent levels of pre-COVID consumer confidence experienced from 2018 to early 2020. The Index declined in each of the next three months, falling to 109.8 in September, which may be reflective of consumers' concern with the nationwide rise in COVID-19 cases that occurred during the summer due to the Delta variant. In October and November, consumer confidence remained relatively flat, rising slightly in both months to 111.9 in November. During these two months, the rate of new COVID-19 cases generally slowed, prior to the introduction of the Omicron variant in late November. However, consumer confidence rose further to 115.2 in December, despite the unprecedented surge in cases that occurred during the month due to the Omicron variant. This represented the first time that the level of consumer confidence moved in the same direction as the number of COVID-19 cases.

In January 2022, as infection rates continued to grow through the Omicron surge, consumer confidence fell to 111.1, its lowest level since September 2021. In February 2022, as gas prices and inflation surged while COVID-19 cases declined drastically, consumer confidence fell to 105.7. Since then, as fuel prices and inflation continued to rise while employment remained strong, it has remained relatively stable, with a May value of 106.4.

Mr. Richard Dreher
 July 8, 2022
 Page 32

Committed Roadway Improvements

Table 15 lists major capacity-enhancing roadway improvements with dedicated funding on the Pennsylvania Turnpike System. Most of these projects are part of PTC’s statewide Total Reconstruction Initiative, which is a multi-year project to widen the mainline and the Northeast Extension to six lanes (three in each direction). On the Mainline I-76/I-276 this includes work throughout the Pittsburgh, Somerset, and Philadelphia metro areas. Nearly 130 miles had been completed as of March 2022, with an additional 21 miles under construction or funded. An additional 24 miles of the Northeast Extension have been widened, with 6 more miles scheduled to be completed by 2030. Since the 2021 Bring Down letter, funding has been designated for two mainline widening projects, from mileposts 312 to 316 and 324 to 326, and the widening project for miles A38-A44 on the Northeast Extension has been split into two separate phases. Table 15 has been updated to reflect these changes. No projects have been completed since the 2021 Bring Down Letter, so no projects have been removed from the list. Furthermore, some dates and mileposts were updated to reflect the latest information available from PTC.

Mr. Richard Dreher

July 8, 2022

Page 33

Table 15 also highlights five non-widening projects:

- A new cashless tolling interchange between I-276 and Lafayette Street in Montgomery County;
- The opening of additional direct connection ramps between I-95/I-295/I-276 in all directions;
- The construction of two interchanges between I-476 and I-81 to create a Scranton Beltway;
- An eight-mile extension of MFE to PA Route 837 in Allegheny County; and
- A 12.5-mile extension of Findlay Connector (Southern Beltway) in the Pittsburgh area.

These projects will serve to enhance capacity and create additional connections to other routes, all of which are expected to increase the number of travelers, and therefore revenue, on the Pennsylvania Turnpike System. Notably, the Southern Beltway project is now nearly complete. A partial interchange with I-79 (from I-79 northbound to the Southern Beltway westbound and from the Southern Beltway eastbound to I-79 southbound) opened in October 2021. Ramps for all remaining movements opened on June 24, 2022. The forecast incorporates estimated traffic and revenue impacts of the complete Southern Beltway beginning in October 2021, with a ramp-up period extending through 2026.

The other four non-widening projects listed above will have positive impacts on traffic and revenue but are not currently reflected in the traffic and revenue forecast. The scheduled completion date for each of these projects is in either 2028 or 2029, beyond the five-year window in which capacity-enhancing capital projects are typically factored into the forecast.

In addition to PTC-funded projects, the Pennsylvania Department of Transportation's (PennDOT's) Transportation Improvement Program (TIP) was reviewed. This review found no projects on competing or complementary routes that are expected to have an impact on Pennsylvania Turnpike System traffic and revenue.

Table 15
Major Committed Roadway Improvements on the Pennsylvania Turnpike System (1)

Milepost	Counties	Description	Actual or Assumed Start Date	Assumed Completion Date
Mainline I-76/I-276/I-95				
28-31	Allegheny and Butler	Reconstruct and widen to 3 lanes in each direction	May 2020	September 2022
102-109	Somerset County	Reconstruct and widen to 3 lanes in each direction	January 2021	August 2024

(1) The major committed roadway improvement projects listed here are a small subset of all projects listed in PTC's FY 2023 Ten Year Capital Plan.

Econometric Forecasting Update

A Bring Down Letter typically utilizes the same demand growth projections from the previous underlying investment grade study, which, in this case, was in 2018. Since then, the U.S. endured a pandemic and short-term recession, and high inflation, fuel prices, and telecommuting rates, among other changes. Therefore, CDM Smith has updated the econometric model developed in 2018 with current independent projections of socioeconomic variables (e.g., population, gross regional product [GRP], and motor fuel prices, etc.) to better capture existing conditions.

Annual socioeconomic forecast growth for every county was applied to the anchored 2016 values used in the 2018 Forecast Study, which thus retained the historical series, equations, and estimated coefficients, establishing alternative forecast trajectories based on the most-recent independent variable trends in the same terms as the historical inputs in the unaltered equations (e.g., real GRP remains in 2009 dollars). Consequently, the socioeconomic forecasting differences are thus restricted to only growth pattern updates, not historical revisions, inflated dollar-denominated

Mr. Richard Dreher

July 8, 2022

Page 35

terms, etc. In the 2018 econometric analysis, three variables impact transaction forecasts: fuel prices, population, and real gross regional product (GRP), with the latter as the major variable.

Population was an explanatory variable for Northeast Extension Ticket System PCs. Woods & Poole revised such forecasts downward for Pennsylvania (3 percent by 2050) and the Northeast Extension's 15-county catchment area (7 percent by 2050), resulting in downward forecast revisions.

Real GRP was an explanatory variable for most plaza groupings. Statewide, Woods & Poole's latest forecast was not substantially different from the 2018 Forecast Study, except for adjustments to 2020 and 2021 historical data. However, within the state, some smaller counties had notable long-term growth differences than previously forecast. Such changes are relatively immaterial in catchment areas including larger metropolitan areas with multiple counties as the individual-county changes are dwarfed and/or offset by changes in other counties within the same catchment area.

Of the PTC catchment counties, GRP was most significantly altered in Westmoreland County, east of Pittsburgh with forecast GDP in 2050 now estimated 30 percent higher than in the 2018. As a result, the GRP reallocation noticeably effects Turnpike 43 (MFE), Turnpike 66 (AKH), and I-376 (BVH). **Table 16** includes historical compound average growth rates (CAGR) for various time periods, forecast CAGR from the 2018 Forecast Study, the updated CAGR, and the difference between those two forecasts.

Along the Ticket System, the updates exhibit almost identical trends as previously, although slightly reduced. In western Pennsylvania, the results are effectively identical, whereas in the eastern part of the state, results are reduced slightly by 0.1 to 0.2 percent annually, applied to both passenger and commercial vehicle equations.

The most notable decline is for Northeast Extension Ticket System PCs due to declines in forecast population growth and the relatively large coefficient for that explanatory variable, amplifying the effect on estimate transaction growth. Annual growth forecasts are reduced by 1.4 percent, from 2.0 to 0.6 percent, with the current forecasts more in line with more recent historical growth.

All other barrier system facilities have smaller changes as they have a more localized focus than the Ticket System and are thus explained with narrower catchment areas surrounding the facilities. In particular, the plaza groupings for Turnpike 43 (MFE) and Turnpike 66 (AKH) have a relatively small number of counties within the respective catchment areas and include Westmoreland County, which had the most significant positive adjustment to real GRP compared to the prior forecast.

Mr. Richard Dreher

July 8, 2022

Page 36

The traffic and revenue forecast has adopted these growth forecasts and selectively applied and/or adjusted them based on other considerations. Although the downward revision of CAGR that most Turnpike groupings experienced due to revised population and GRP forecasts are seemingly minor, the compounding nature of growth rates and the 30-year time horizon of this traffic and revenue result in this revised econometric forecast being the primary driver of the notable decline in transactions, as compared to the 2021 Bring Down Letter, that is expected throughout the forecast period and is summarized later on in Table 22.

Actual Versus Estimated Traffic and Toll Revenue

Table 17 provides a comparison of actual traffic and toll revenue versus estimated traffic and toll revenue from CDM Smith's 2021 Bring Down Letter. The analysis period in this table is from April 2021 through May 2022. This 14-month period corresponds to the period for which actual data currently exist but was estimated at the time of the 2021 Bring Down Letter.

Mr. Richard Dreher
 July 8, 2022
 Page 37

For the 14-month period shown in Table 17, total system actual PC transactions and revenue exceeded estimates by 3.2 percent and 4.3 percent, respectively. CV transactions and revenue exceeded estimates by 5.7 percent and 5.8 percent, respectively. For all vehicles, actual transactions were 3.6 percent above estimates, while toll revenue overperformed estimates by 5.0 percent.

(1) These 14 months correspond to the period for which actual data exists, but was estimated at the time of CDM Smith's 2021 Bring Down Letter.

Mr. Richard Dreher

July 8, 2022

Page 38

Table 17 also includes a comparison of actual traffic and toll revenue versus estimated traffic and toll revenue from CDM Smith's 2021 Bring Down Letter for each individual Turnpike toll facility. Total transactions for the Ticket System were 3.6 percent higher than the forecast traffic, while actual total revenue was 4.2 percent higher than estimated. For the combined barrier toll facilities, total actual toll transactions exceeded CDM Smith estimates by 3.6 percent and actual toll revenue exceeded estimates by 9.6 percent.

Turnpike I-576's significant overperformance of 20.6 percent on transactions and 73.5 percent on revenue is due to the fact that it partially opened in October 2021, rather than the January 2022 date that was utilized in the forecast. As a result, it had more than two full months of transactions and revenue that were unanticipated at the time of the 2021 Bring Down Letter. However, Turnpike I-576 generates the second-fewest transactions and least revenue of any the Barrier Facilities operated by PTC. Therefore, even if this facility is ignored, the Barrier Systems as a whole still overperformed forecast transactions and revenue by 2.3 and 8.0 percent, respectively.

Estimated COVID-19 Traffic and Toll Revenue Impacts

A key undertaking of this new forecast was to update the traffic and toll revenue impacts related to the COVID-19 pandemic over the forecast period. This section will provide a summary of the underlying assumptions CDM Smith has made in estimating the depth and longevity of the COVID-19 related impacts on Turnpike System traffic and toll revenue. Actual traffic and toll revenue experience through the end of May 2022 was collected as part of this analysis. Pandemic-related impacts began negatively effecting Turnpike System transactions and toll revenue in March 2020. A key assumption in this analysis is that negative traffic and revenue impacts due to the increased prevalence of telecommuting that began during the pandemic will continue through the end of the forecast period in FY 2050-51.

Due to the unpredictable nature of the pandemic and the changing infection rates, changes to operating procedures and capacity restrictions of businesses and schools is an unknown variable. Although future resurgence of the virus could potentially result in the re-establishment of restrictions, very few restrictions seem to have been reinstated, either nationally or within Pennsylvania, while case counts rose throughout the spring of 2022. Similarly, transactions levels were not noticeably impacted during this period either. Accordingly, traffic recovery is assumed to continue through the remainder of 2022.

Compounding the negative transaction and revenue effects of COVID-19, since the fall of 2021 gas prices have risen significantly. Although prices are forecast to decrease over the coming months and years, they are likely to remain elevated above pre-pandemic levels, and thus have a dampening effect on transactions for much of the current decade. Therefore, gasoline prices are estimated to have further negative effects on transactions and revenue from May 2022 through

Mr. Richard Dreher
 July 8, 2022
 Page 39

December 2028. Negative impacts are estimated to range from 0.2 to 0.8 percent of baseline transactions during this period and are included within the total estimated COVID-19 impacts.

Table 18 shows estimated historical and future COVID-19 related impacts on toll revenue between FY 2018-19 and FY 2028-29. Only the final three months of FY 2019-20 (March, April, May) were impacted, but over that time gross toll revenue was estimated to have been reduced by about \$143.1 million, or 10.0 percent of annual total gross revenue. While the peak monthly negative impacts occurred in FY 2019-20, the largest annual declines are estimated to have occurred in FY 2020-21 since this included 12 months of negative impacts. As shown in Table 18, total gross toll revenue losses have been \$254.2 million, or 16.8 percent of total gross toll revenue for the fiscal year.

Fiscal Year (2)	Annual Gross Toll Revenue Impacts (in thousands)			Percentage Impacts on Annual Gross Toll Revenue		
	Passenger	Commercial	Total	Passenger	Commercial	Total
	Cars	Vehicles	Vehicles	Cars	Vehicles	Vehicles
2018-19 (3,4,5)	\$0	\$0	\$0	0.0%	0.0%	0.0%
2019-20 (3,6,7)	(115,318)	(27,781)	(143,099)	(14.4)	(4.4)	(10.0)
2020-21 (3,8)	(231,302)	(22,870)	(254,172)	(27.5)	(3.4)	(16.8)
2021-22 (3,9)	(96,577)	26,094	(70,483)	(10.5)	3.6	(4.3)
2022-23 (10)	(104,898)	13,044	(91,854)	(10.9)	1.7	(5.3)
2023-24 (10)	(77,178)	2,436	(74,742)	(7.6)	0.3	(4.1)
2024-25 (10)	(39,330)	(1,189)	(40,519)	(3.7)	(0.1)	(2.1)
2025-26 (10)	(29,358)	(1,489)	(30,846)	(2.6)	(0.2)	(1.5)
2026-27 (10)	(31,097)	(2,170)	(33,268)	(2.7)	(0.2)	(1.6)
2027-28 (10)	(32,796)	(2,636)	(35,431)	(2.7)	(0.3)	(1.6)
2028-29 (10)	(31,977)	(1,804)	(33,781)	(2.5)	(0.2)	(1.5)

(1) Annual toll rate increases are implemented on or about January 1st of each year.
 (2) PTC fiscal year ends May 31.
 (3) Reflects actual revenue experience.
 (4) The Findlay Connector converted to AET in early June 2018.
 (5) The partial I-95 Interchange (Stage 1) opened in September 2018.
 (6) AKH and Gateway converted to AET at the end of October 2019.
 (7) Cash collection on Ticket System suspended and converted to AET on March 16, 2020.
 (8) Mon-Fayette Expressway converted to AET on June 11, 2020.
 (9) Reflects opening of Southern Beltway between US 22 and I-79 beginning in October 2021.
 (10) Reflects COVID-19 and related recessionary impacts, including fuel price impacts.

Negative gross toll revenue impacts are estimated to lessen over the following eight years. By FY 2028-29 total gross toll revenue losses are assumed to be only about 1.5 percent of annual gross toll revenue. No fuel price impact is assumed beginning in FY 2029-30, although negative COVID-19 impacts of 1 to 4 percent, depending on the system, is assumed for PCs through the end of the forecast period in FY 2050-51. These negative impacts account for the increased prevalence of telecommuting that is assumed to be a permanent fixture of nationwide traffic patterns.

Mr. Richard Dreher

July 8, 2022

Page 40

As shown, CV revenue is assumed to increase between FY 2021-22 and FY 2023-24. This is due to outperformance from CV traffic as well as variations in trip length and size distribution from impacts from the pandemic. These positive impacts are forecasted to decline by FY 2024-25 as CV traffic returns to more normal patterns. The negative impacts to CV revenue beginning in FY 2024-25 are due to the negative impacts of fuel prices outweighing the positive impacts of COVID-19 from that point forward.

Estimated Traffic and Gross Toll Revenue

Updated traffic and gross toll revenue estimates were developed through FY 2050-51 incorporating the following changes into the forecast. All these changes were described in previous sections.

- Actual traffic and revenue experience through May 2022 (Tables 3-12);
- Revised estimates of E-ZPass penetration rates (Table 14);
- Long-range growth of socioeconomic indicators (Table 16); and
- Updated impacts related to COVID-19 and fuel prices (Table 18).

Other assumptions remain unchanged from the 2021 Bring Down Letter, including:

- Future toll increase assumptions (Table 13);
- Other than the completion of the Southern Beltway, there will be no new capacity-enhancing roadway improvements in the next five years (Table 15); and
- Structure of the CV discount program.

Table 19 shows the total traffic and toll revenue for the Ticket System only. Data for FY 2020-21 and FY 2021-22 each reflect a full year of actual experience. Total toll transactions increase from 123.0 million to 183.4 million over the period shown in Table 19, an average annual increase of 1.3 percent. Gross toll revenue increases from \$1.1 billion to \$4.3 billion by FY 2050-51. This amounts to an average annual increase of 4.8 percent, reflecting the impact of normal growth plus the annual rate adjustments.

The same information is shown for the Barrier System in **Table 20**. Total annual toll transactions are estimated to grow from 44.6 million to 62.7 million over the period shown, an average rate of 1.1 percent. New toll transactions from the initial opening of the Southern Beltway in October 2021 and the opening of all ramps movements between the Southern Beltway and I-79 in June 2022 contribute to total barrier growth rates. Barrier System total revenue is estimated to increase from \$196.0 million to \$735.0 million over the same period, an annual rate of 4.5 percent, reflecting normal growth plus annual rate adjustments.

- (1) Annual toll rate increases are implemented on or about January 1st of each year.
- (2) PTC fiscal year ends May 31.
- (3) Reflects actual traffic and revenue experience.
- (4) Mon-Fayette Expressway converted to AET on June 11, 2020.
- (5) The Southern Beltway between US 22 and I-79 opened in October 2021.
- (6) Reflects COVID-19 and related impacts through FY 2050-51, including fuel price impacts through FY 2028-29.
- (7) Reflects opening of all ramp movements between the Southern Beltway and I-79 in June 2022.

Mr. Richard Dreher

July 8, 2022

Page 43

Table 21 presents estimated total combined Ticket and Barrier System transactions, gross toll revenue, and toll discounts and adjustments. The vast majority of discounts and adjustments result from commercial account toll adjustments due to PTC's volume discount program. This program provides a 3.0-percent discount to accounts that accrue \$20,000 or more in monthly tolls. Discounts and adjustments shown in Table 21 assume no changes to the post-paid commercial volume discount program during the forecast period. Actual discounts and adjustments have been slowly increasing over time and amounted to 1.74 percent of CV gross toll revenue in FY 2021-22. The forecast assumes that the adjustment will continue to gradually increase to 2.01 percent of CV gross toll revenue in FY 2029-30 and then remain at that level for the remainder of the forecast period.

As shown in Table 21, total toll transactions are expected to increase from 167.6 million to 246.1 million over the period shown. This amounts to an average annual growth rate of 1.3 percent. Total net toll revenue is estimated to grow from approximately \$1.3 billion in FY 2020-21 to \$5.1 billion by FY 2050-51. This reflects an average annual growth rate in gross toll revenue of 4.7 percent. Again, this includes the impact of normal growth plus annual toll rate adjustments.

Table 22 compares the current traffic and net toll revenue forecast with the forecast developed in the 2021 Bring Down Letter. As shown, actual total transactions for FY 2020-21 were 1.6 percent lower than forecast in the 2021 Bring Down Letter. Conversely, actual FY 2021-22 transactions were 4.3 percent higher than previously estimated due to better-than-expected COVID-19 impacts. Over the next four fiscal years, through FY 2025-26, the current forecast estimates that transactions will be between 0.2 and 2.5 percent higher each year than previously estimated. However, in the remainder of the forecast period current forecast total toll transactions are less than those forecast in the 2021 Bring Down Letter. The difference is 0.7 percent in FY 2025-26, growing each successive year to 5.5 percent in FY 2049-50. Previously detailed updates to the econometric forecast account for most of the long-term difference in the forecast, although higher than previously expected gas prices and long-term COVID-19 impacts on passenger vehicles not previously included also contribute to the downward revision.

Differences between the 2021 Bring Down Letter and current forecasts are smaller for annual net toll revenue, however. As was the case with transactions, revenue in FY 2021-22 overperformed the prior estimate, with an even larger difference of 5.5 percent, and is now forecast to be higher each fiscal year through FY 2024-25. Beginning in FY 2025-26, revenue is forecast to be 0.8 percent lower than estimated in the 2021 Bring Down Letter. This discrepancy grows each year through FY 2049-50, when the difference is 4.5 percent and is mostly a result of the lower long-term growth forecast from the updated econometric modeling.

(1) PTC fiscal year ends May 31.

(2) Reflects actual experience through May 2022.

(3) Reflects actual traffic and revenue experience through March 2021.

Mr. Richard Dreher

July 8, 2022

Page 46

Table 23 summarizes the full net revenue forecast, including written off bad debt expenses. Now that the PTC system is fully AET, there is some amount of video tolls that will be uncollectable and written off as a bad debt expense, thereby subtracting from net toll revenue. As transactions are estimated to grow each year, along with higher revenue due to toll increases, so too does bad debt expense. In FY 2021-22, the first full year of AET operation, bad debt expense was \$99.0 million and is estimated to grow to \$234.1 million in FY 2050-51 recognizing growth in transactions and annual toll increases. Total net toll revenue minus the video bad debt expense is estimated to grow from approximately \$1.2 billion in FY 2020-21 to \$4.8 billion by FY 2050-51.

2050-51 (6)	5,012,674	(234,100)	4,778,574

(1) Annual toll rate increases are implemented on or about January 1st of each year.

(2) PTC fiscal year ends May 31.

(3) Reflects actual traffic and revenue experience.

(4) Mon-Fayette Expressway converted to AET on June 11, 2020.

(5) The Southern Beltway between US 22 and I-79 opened in October 2021.

(6) Reflects COVID-19 and related impacts through FY 2050-51, including fuel price impacts through FY 2028-29.

(7) Reflects opening of all ramp movements between the Southern Beltway and I-79 in June 2022.

Mr. Richard Dreher

Fiduciary Disclaimer

CDM Smith used currently-accepted professional practices and procedures in the development of the traffic and revenue estimates in this report. However, as with any forecast, it should be understood that differences between forecasted and actual results may occur, as caused by events and circumstances beyond the control of the forecasters. In formulating the estimates, CDM Smith reasonably relied upon the accuracy and completeness of information provided (both written and oral) by the Pennsylvania Turnpike Commission (PTC). CDM Smith also relied upon the reasonable assurances of independent parties and is not aware of any material facts that would make such information misleading.

CDM Smith made qualitative judgments related to several key variables in the development and analysis of the traffic and revenue estimates that must be considered as a whole; therefore, selecting portions of any individual result without consideration of the intent of the whole may create a misleading or incomplete view of the results and the underlying methodologies used to obtain the results. CDM Smith gives no opinion as to the value or merit of partial information extracted from this report.

All estimates and projections reported herein are based on CDM Smith's experience and judgment and on a review of information obtained from multiple agencies, including PTC. These estimates and projections may not be indicative of actual or future values, and are therefore subject to substantial uncertainty. Certain variables such as future developments, economic cycles, pandemics, government actions, climate change related events, or impacts related to advances in automotive technology etc. cannot be predicted with certainty, and may affect the estimates or projections expressed in this report, such that CDM Smith does not specifically guarantee or warrant any estimate or projection contained within this report.

While CDM Smith believes that the projections and other forward-looking statements contained within the report are based on reasonable assumptions as of the date of the report, such forward-looking statements involve risks and uncertainties that may cause actual results to differ materially from the results predicted. Therefore, following the date of this report, CDM Smith will take no responsibility or assume any obligation to advise of changes that may affect its assumptions contained within the report, as they pertain to socioeconomic and demographic forecasts, proposed residential or commercial land use development projects and/or potential improvements to the regional transportation network.

The report and its contents are intended solely for use by PTC and designated parties approved by PTC and CDM Smith. Any use by third-parties, other than as noted above, is expressly prohibited. In addition, any publication of the report without the express written consent of CDM Smith is prohibited.
